Douglas M. Bates

lme4: Mixed-effects modeling with R

February 17, 2010

Springer

Contents

1 A Simple, Linear, Mixed-effects Model 1
1.1 Mixed-effects Models 1
1.2 The `Dyestuff` and `Dyestuff2` Data 3
1.2.1 The `Dyestuff` Data 3
1.2.2 The `Dyestuff2` Data 5
1.3 Fitting Linear Mixed Models 7
1.3.1 A Model For the `Dyestuff` Data 7
1.3.2 A Model For the `Dyestuff2` Data 10
1.3.3 Further Assessment of the Fitted Models 11
1.4 The Linear Mixed-effects Probability Model 12
1.4.1 Definitions and Results 12
1.4.2 Matrices and Vectors in the Fitted Model Object 14
1.5 Assessing the Variability of the Parameter Estimates 15
1.5.1 Confidence Intervals on the Parameters 16
1.5.2 Interpreting the Profile Zeta Plot 18
1.5.3 Profile Pairs Plots 19
1.6 Assessing the Random Effects 22
1.7 Chapter Summary 25
Exercises 25

2 Models With Multiple Random-effects Terms 27
2.1 A Model With Crossed Random Effects 27
2.1.1 The `Penicillin` Data 28
2.1.2 A Model For the `Penicillin` Data 30
2.2 A Model With Nested Random Effects 36
2.2.1 The `Pastes` Data 36
2.2.2 Fitting a Model With Nested Random Effects 40
2.2.3 Parameter Estimates for Model `fm3` 41
2.2.4 Testing $H_0 : \sigma_2 = 0$ Versus $H_a : \sigma_2 > 0$ 42
2.2.5 Assessing the Reduced Model, `fm3a` 45
2.3 A Model With Partially Crossed Random Effects 45

2.3.1 The `InstEval` Data 47
2.3.2 Structure of **L** for model `fm4` 50
2.4 Chapter Summary 50
Exercises 52

3 Models Incorporating Covariates 55
3.1 Models for the `ergoStool` data 55
3.1.1 Random-effects for both `Subject` and `Type` 56
3.1.2 Using Fixed Effects for `Type` and Random Effects for `Subject` 59
3.2 Covariates Affecting Mathematics Score Gain 59
3.3 Rat Brain example 61

4 Models for Longitudinal Data 63
4.1 The `sleepstudy` Data 63
4.1.1 Characteristics of the `sleepstudy` Data Plot 65
4.2 Mixed-effects Models For the `sleepstudy` Data 66
4.2.1 A Model With Correlated Random Effects 66
4.2.2 A Model With Uncorrelated Random Effects 69
4.2.3 Generating **Z** and Λ From Random-effects Terms 71
4.2.4 Comparing Models `fm9` and `fm8` 73
4.3 Assessing the Precision of the Parameter Estimates 73
4.4 Examining the Random Effects and Predictions 76
4.5 Chapter Summary 80
Problems 80

5 Computational Methods for Mixed Models 83
5.1 Definitions and Basic Results 83
5.2 The Conditional Distribution $(\mathcal{U}|\mathcal{Y}=\mathbf{y})$ 85
5.3 Integrating $h(\mathbf{u})$ in the Linear Mixed Model 86
5.4 Determining the PLS Solutions, $\tilde{\mathbf{u}}$ and $\widehat{\beta}_\theta$ 88
5.4.1 The Fill-reducing Permutation, **P** 89
5.4.2 The Value of the Deviance and Profiled Deviance 90
5.4.3 Determining r^2_θ and $\widehat{\beta}_\theta$ 92
5.5 The REML Criterion 93
5.6 Step-by-step Evaluation of the Profiled Deviance 95
5.7 Generalizing to Other Forms of Mixed Models 97
5.7.1 Descriptions of the Model Forms 98
5.7.2 Determining the Conditional Mode, $\tilde{\mathbf{u}}$ 99
5.8 Chapter Summary 100
Exercises 101

References 103

List of Figures

1.1 Yield of dyestuff from 6 batches of an intermediate 5
1.2 Simulated data similar in structure to the `Dyestuff` data 6
1.3 Image of the Λ for model `fm1ML` 15
1.4 Image of the random-effects model matrix, $\mathbf{Z}^\mathsf{T}$, for `fm1` 15
1.5 Profile zeta plots of the parameters in model `fm1ML` 17
1.6 Absolute value profile zeta plots of the parameters in model `fm1ML` 17
1.7 Profile zeta plots comparing $\log(\sigma)$, σ and σ^2 in model `fm1ML` . 18
1.8 Profile zeta plots comparing $\log(\sigma_1)$, σ_1 and σ_1^2 in model `fm1ML` 19
1.9 Profile pairs plot for the parameters in model `fm1` 20
1.10 95% prediction intervals on the random effects in `fm1ML`, shown as a dotplot. 24
1.11 95% prediction intervals on the random effects in `fm1ML` versus quantiles of the standard normal distribution. 24
1.12 Travel time for an ultrasonic wave test on 6 rails 26

2.1 Diameter of growth inhibition zone for 6 samples of penicillin . 29
2.2 Random effects prediction intervals for model `fm2` 31
2.3 Image of the random-effects model matrix for `fm2` 32
2.4 Images of Λ, $\mathbf{Z}^\mathsf{T}\mathbf{Z}$ and $\mathbf{L}$ for model `fm2` 32
2.5 Profile zeta plot of the parameters in model `fm2` 33
2.6 Profile pairs plot of the parameters in model `fm2` 34
2.7 Profile pairs plot for model `fm2` (log scale) 35
2.8 Cross-tabulation image of the `batch` and `sample` factors 37
2.9 Strength of paste preparations by batch and sample 38
2.10 Images of Λ, $\mathbf{Z}^\mathsf{T}\mathbf{Z}$ and $\mathbf{L}$ for model `fm3` 41
2.11 Random effects prediction intervals for model `fm3` 42
2.12 Profile zeta plots for the parameters in model `fm3` 43
2.13 Profile zeta plots for the parameters in model `fm3a` 45
2.14 Profile pairs plot of the parameters in model `fm3a` 46
2.15 Random effects prediction intervals for model `fm4` 48

2.16 Image of the sparse Cholesky factor, **L**, from model `fm4` 49

3.1 Effort to arise by subject and stool type 56
3.2 Profile zeta plot for the parameters in model `fm5` 58
3.3 Profile zeta plot for the parameters in model `fm5` 58
3.4 Prediction intervals on the random effects for stool type 59
3.5 Profile plot of the parameters in model `fm4`. 61
3.6 Activation of brain regions in rats 62

4.1 Lattice plot of the `sleepstudy` data 64
4.2 Images of Λ, Σ and **L** for model `fm8` 68
4.3 Images of Λ, Σ and **L** for model `fm9` 71
4.4 Images of $\mathbf{Z}^\mathsf{T}$ for models `fm8` and `fm9` 71
4.5 Profile zeta plots for the parameters in model `fm9` 74
4.6 Profile pairs plot for the parameters in model `fm9` 75
4.7 Plot of the conditional modes of the random effects for model `fm9` (left panel) and the corresponding subject-specific coefficients (right panel) 77
4.8 Comparison of within-subject estimates and conditional modes for `fm9` 78
4.9 Comparison of predictions from separate fits and `fm9` 79
4.10 Prediction intervals on the random effects for model `fm9`. 81
